Question

Are the following statements about $T_{\mathbb{Z}}$ true? Briefly explain the reason (you may use conclusions from lectures).

- (a) $T_{\mathbb{Z}}$ is decidable.
- (b) $T_{\mathbb{Z}}$ is complete.
- (c) If a formula ϕ is both a $\Sigma_{\mathbb{Z}}$ -formula and a $\Sigma_{\mathbb{N}}$ -formula, then: ϕ is $T_{\mathbb{N}}$ -valid if and only if ϕ is $T_{\mathbb{Z}}$ -valid.

Question

Are the following statements about $T_{\mathbb{Z}}$ true? Briefly explain the reason (you may use conclusions from lectures).

- (a) $T_{\mathbb{Z}}$ is decidable.
- (b) $T_{\mathbb{Z}}$ is complete.
- (c) If a formula ϕ is both a $\Sigma_{\mathbb{Z}}$ -formula and a $\Sigma_{\mathbb{N}}$ -formula, then:
 ϕ is $T_{\mathbb{N}}$ -valid if and only if ϕ is $T_{\mathbb{Z}}$ -valid.

参考解答:

Solution (a), (b) 是对的, (c) 是错的。

$T_{\mathbb{Z}}$ 可以归结到 $T_{\mathbb{N}}$, 由于 $T_{\mathbb{N}}$ 是 decidable, complete 的, 因此 $T_{\mathbb{Z}}$ 也是 decidable, complete.

考虑公式 $\forall x, \neg(x + 1 = 0)$, 这既是 $T_{\mathbb{Z}}$ 也是 $T_{\mathbb{N}}$, 但显然, 在 $T_{\mathbb{N}}$ 上对任意取值都满足, 是 valid; 但在 $T_{\mathbb{Z}}$ 上, 当 x 取 -1 时不满足, 因此不是 valid。所以 $T_{\mathbb{Z}}$ -valid 和 $T_{\mathbb{N}}$ -valid 并不等价。■

Question

Are the following statements about $T_{\mathbb{Z}}$ true? Briefly explain the reason (you may use conclusions from lectures).

- (a) $T_{\mathbb{Z}}$ is decidable.
- (b) $T_{\mathbb{Z}}$ is complete.
- (c) If a formula ϕ is both a $\Sigma \mathbb{Z}$ -formula and a $\Sigma \mathbb{N}$ -formula, then: ϕ is $T_{\mathbb{N}}$ -valid if and only if ϕ is $T_{\mathbb{Z}}$ -valid.

参考解答:

Solution (a), (b) 是对的, (c) 是错的。

$T_{\mathbb{Z}}$ 可以归结到 $T_{\mathbb{N}}$, 由于 $T_{\mathbb{N}}$ 是 decidable, complete 的, 因此 $T_{\mathbb{Z}}$ 也是 decidable, complete.

考虑公式 $\forall x, \neg(x + 1 = 0)$, 这既是 $T_{\mathbb{Z}}$ 也是 $T_{\mathbb{N}}$, 但显然, 在 $T_{\mathbb{N}}$ 上对任意取值都满足, 是 valid; 但在 $T_{\mathbb{Z}}$ 上, 当 x 取 -1 时不满足, 因此不是 valid。所以 $T_{\mathbb{Z}}$ -valid 和 $T_{\mathbb{N}}$ -valid 并不等价。■

注意: 自然数不包括负数! 可归约不意味着二者完全等同!

Question

Is the following formula T_A -valid? Briefly explain the reason:

$$(a[i] = x \wedge x = y) \rightarrow a\langle i \triangleleft y \rangle = a$$

Question

Is the following formula T_A -valid? Briefly explain the reason:

$$(a[i] = x \wedge x = y) \rightarrow a\langle i \triangleleft y \rangle = a$$

错误解答:

Solution Yes.

1.	$I \not\models (a[i] = x \wedge x = y) \rightarrow a\langle i \triangleleft y \rangle = a$	assumption
2.	$I \models a[i] = x \wedge x = y$	1, \rightarrow
3.	$I \models a[i] = x$	2, \wedge
4.	$I \models x = y$	2, \wedge
5.	$I \models a[i] = y$	3, 4, (transitivity)
6.	$I \not\models a\langle i \triangleleft y \rangle = a$	1, \rightarrow
7.	$I \models a\langle i \triangleleft y \rangle \neq a$	6, \neg
8.	$I \models \neg(\forall j. a\langle i \triangleleft y \rangle[j] = a[j])$	7, (extensionality)
9.	$I \not\models \forall j. a\langle i \triangleleft y \rangle[j] = a[j]$	8, \neg
10.	$I_1 : I \triangleleft \{j \mapsto j_0\}$	9, \forall , for some $j_0 \in D_I$
11.	$I_1 \models a\langle i \triangleleft y \rangle[j] \neq a[j]$	10, \neg
12.	$I_1 \models i = j$	11, (read-over-write 2)
13.	$I_1 \models a[i] = a[j]$	12, (array congruence)
14.	$I_1 \models a\langle i \triangleleft y \rangle[j] = y$	12, (read-over-write 1)
15.	$I_1 \models y = a[i]$	5, (symmetry)
16.	$I_1 \models a\langle i \triangleleft y \rangle[j] = a[i]$	14, 15, (transitivity)
17.	$I_1 \models a\langle i \triangleleft y \rangle[j] = a[j]$	16, 13, (transitivity)
18.	$I_1 \models \perp$	11, 15 ■

Question

Is the following formula T_A -valid? Briefly explain the reason:

$$(a[i] = x \wedge x = y) \rightarrow a[i \triangleleft y] = a$$

参考解答:

Solution 不是。原因: T_A 中等号只能作用在数组元素上。■

注意: T_A -valid 的公式必然是 T_A -公式!

回顾: L06 T_A Signature

Question

T_A is not convex – show that by providing a counterexample.

Question

T_A is not convex – show that by providing a counterexample.

回顾: L08 Convex Theory

Question

T_A is not convex – show that by providing a counterexample.

回顾: L08 Convex Theory

参考解答:

Solution Formula F :

$$a\langle i \triangleleft v \rangle[j] = a[i]$$

Then:

$$F \Rightarrow i = j \vee a[i] = a[j]$$

But neither $i = j$ nor $a[i] = a[j]$. ■

Question

Use the semantic method to check the validity of the following formulas. If not valid, please find a counterexample (a falsifying interpretation in its theory). In $\mathcal{T}_{\mathbb{Z}}$:

$$(1 \leq x \wedge x \leq 2) \rightarrow (x = 1 \vee x = 2)$$

Question

Use the semantic method to check the validity of the following formulas. If not valid, please find a counterexample (a falsifying interpretation in its theory). In $T_{\mathbb{Z}}$:

$$(1 \leq x \wedge x \leq 2) \rightarrow (x = 1 \vee x = 2)$$

回顾: L02 Semantic Argument

Question

Use the semantic method to check the validity of the following formulas. If not valid, please find a counterexample (a falsifying interpretation in its theory). In $T_{\mathbb{Z}}$:

$$(1 \leq x \wedge x \leq 2) \rightarrow (x = 1 \vee x = 2)$$

回顾: L02 Semantic Argument

参考解答:

Solution

- | | | |
|----|---|-----------------------------|
| 1. | $I \not\models (1 \leq x \wedge x \leq 2) \rightarrow (x = 1 \vee x = 2)$ | assumption |
| 2. | $I \models 1 \leq x \wedge x \leq 2$ | 1, \rightarrow |
| 3. | $I \not\models x = 1 \vee x = 2$ | 1, \rightarrow |
| 4. | $I \not\models x = 1$ | 3, \vee |
| 5. | $I \not\models x = 2$ | 3, \vee |
| 6. | $I \models \perp$ | 2, 4, 5, $T_{\mathbb{Z}}$ ■ |

Question

Use the semantic method to check the validity of the following formulas. If not valid, please find a counterexample (a falsifying interpretation in its theory). In $T_{\mathbb{Z}}$:

$$(1 \leq x \wedge x \leq 2) \rightarrow (x = 1 \vee x = 2)$$

回顾: L02 Semantic Argument

参考解答:

Solution

- | | | |
|----|---|-----------------------------|
| 1. | $I \not\models (1 \leq x \wedge x \leq 2) \rightarrow (x = 1 \vee x = 2)$ | assumption |
| 2. | $I \models 1 \leq x \wedge x \leq 2$ | 1, \rightarrow |
| 3. | $I \not\models x = 1 \vee x = 2$ | 1, \rightarrow |

Solution

简答题

证明题 (用
Semantic
Argument)

证明题 (用
Decision
Procedure)

回顾前半期内
容

index	branch	rule
1	$I \not\models F$	(assum.)
2	$I \models 1 \leq x \wedge x \leq 2$	$1, \rightarrow$
3	$I \not\models x = 1 \vee x = 2$	$1, \rightarrow$
4	$I \models x \neq 1 \wedge x \neq 2$	$3, \vee$
5	$I \models x \neq 1$	$4, \wedge$
6	$I \models x \neq 2$	$4, \wedge$
7	$I \models x = 1 \vee x = 2$	$2, T_{\mathbb{Z}}$
8	$I \models x = 1$	$7, \vee, \text{case a}$
9	$I \models x = 2$	$7, \vee, \text{case b}$
10	\perp	$5, 8, \text{case a}$
11	\perp	$6, 9, \text{case b}$

Thus, F is $T_{\mathbb{Z}}$ -valid. ■

“case a, case b” 指什么？建议用 “left-hand side, right-hand side” 等更清晰的术语表达。(L02 也有这个问题)
其他写得很清楚。

Semantic
Argument)

证明题 (用
Decision
Procedure)

回顾前半期内容

1 简答题

2 证明题 (用 Semantic Argument)

3 证明题 (用 Decision Procedure)

4 回顾前半期内容

Question

Apply the decision procedure for quantifier-free T_A to the following Σ_A -formula:

$$a \langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

Question

Apply the decision procedure for quantifier-free T_A to the following Σ_A -formula:

$$a\langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

错误解答 1:

Solution 因为 $i = j \wedge j \neq k$, 所以 $a\langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = a[k]$, 式子化为:

$$a[k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

显然不可满足。 ■

Question

$$a \langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

错误解答 2:

Solution

1. Simplify F :

$$F : a[k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

2. Obviously, F is T_A -unsatisfiable.

Question

$$a\langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

错误解答 3:

Solution -

不可满足

根据F可知, $a\langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g$ 既有 $a[k] = g$ 但是与 $a[k] \neq g$ 矛盾。

因此原式不可满足。 ■

Question

$$a\langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

错误解答 3:

Solution -

不可满足

根据F可知, $a\langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g$ 既有 $a[k] = g$ 但是与 $a[k] \neq g$ 矛盾。

因此原式不可满足。 ■

错误原因: 没有用 decision procedure (L07) 或者步骤过于简略

再读一遍题目：

Question

Apply the decision procedure for quantifier-free T_A to the following Σ_A -formula:

$$a \langle i \triangleleft e \rangle \langle j \triangleleft f \rangle [k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g$$

参考解答:

Solution

- For F , assume $j = k$:

$$F_1 : f = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g \wedge j = k$$

which has no write terms, so build a T_E -formula:

$$F'_1 : f = g \wedge j \neq k \wedge i = j \wedge a(k) \neq g \wedge j = k$$

which is not satisfiable.

- For F , assume $j \neq k$:

$$F_2 : a\langle i \triangleleft e \rangle[k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g \wedge j \neq k$$

- For F_2 , assume $i = k$:

$$F_3 : e = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g \wedge j \neq k \wedge i = k$$

which has no write terms, so build a T_E -formula:

$$F'_3 : e = g \wedge j \neq k \wedge i = j \wedge a(k) \neq g \wedge j \neq k \wedge i = k$$

which is not satisfiable.

- For F_2 , assume $i \neq k$:

$$F_4 : a[k] = g \wedge j \neq k \wedge i = j \wedge a[k] \neq g \wedge j \neq k \wedge i \neq k$$

which has no write terms, so build a T_E -formula:

$$F'_4 : a(k) = g \wedge j \neq k \wedge i = j \wedge a(k) \neq g \wedge j \neq k \wedge i \neq k$$

which is not satisfiable.

Every branch reaches contradiction, so unsat. ■

Question

Apply the Nelson-Oppen method to the following formula in $T_{\mathbb{Z}} \cup T_A$:

$$a[i] \geq 1 \wedge a[i] + x \leq 2 \wedge x > 0 \wedge x = i \wedge a\langle x \triangleleft 2 \rangle[i] \neq 1$$

Do it first using the nondeterministic version (i.e. guess and check), and then the deterministic version (i.e. equality propagation).

Question

Apply the Nelson-Oppen method to the following formula in $T_{\mathbb{Z}} \cup T_A$:

$$a[i] \geq 1 \wedge a[i] + x \leq 2 \wedge x > 0 \wedge x = i \wedge a\langle x \triangleleft 2 \rangle[i] \neq 1$$

Do it first using the nondeterministic version (i.e. guess and check), and then the deterministic version (i.e. equality propagation).

回顾: L08

Question

$$a[i] \geq 1 \wedge a[i] + x \leq 2 \wedge x > 0 \wedge x = i \wedge a\langle x \triangleleft 2 \rangle[i] \neq 1$$

错误解答 1 (只用了 guess and check):

Solution -

将原式拆分为 T_Z 和 T_A 两部分

$$T_Z : w_1 \geq 1 \wedge w_1 + x \leq 2 \wedge x > 0 \wedge w_2 = 2 \wedge w_3 = 1$$

$$T_A : w_1 = a[i] \wedge a\langle x \triangleleft w_2 \rangle[i] \neq w_3 \wedge x = i$$

$$V = \{w_1, w_2, w_3, x\}$$

猜测: $\{\{w_1, w_3, x\}, \{w_2\}\}$ 是可满足的。

T_Z 可得 $w_1 = x = w_3$

代入 T_A 后不会产生矛盾, 可满足。

Question

$$a[i] \geq 1 \wedge a[i] + x \leq 2 \wedge x > 0 \wedge x = i \wedge a(x \triangleleft 2)[i] \neq 1$$

错误解答 2 (概念性错误):

Solution 设 $u = 0, v = 1, w = 2$, 则可以将原式化为两个论域下的式子:

$T_{\mathbb{Z}} : x = i \wedge x > 0 \wedge u = 0 \wedge v = 1 \wedge w = 2 \quad T_A : a[i] \geq v \wedge a[i] + x \leq w \wedge a(x \triangleleft w)[i] \neq v$ 共同变量为 x, i, u, v, w

1. 首先用 guess and check 方法,

令 x, i, v, u, w 为等价类, 设 $a[1] = 1$, 原式成立

2. 用 equality propagation 方法

$x = i$ 得到 x, i, u, w, v

于是 $a[i] \geq 1$ 得到 $a[x] \geq 1, a[i] + x \leq 2$ 得到 $a[x] + x \leq 2$

又有 $x > 0$ 即 $x \geq 1$, 综合上述有 $2 \leq a[x] + x \leq 2$ 即 $a[x] = x = 1 = v$

此时等价类有 x, i, v, u, w 带入原式, 没有矛盾。

因此原式可满足 ■

Question

Apply the Nelson-Oppen method to the following formula in $T_{\mathbb{Z}} \cup T_A$:

$$a[i] \geq 1 \wedge a[i] + x \leq 2 \wedge x > 0 \wedge x = i \wedge a\langle x \triangleleft 2 \rangle[i] \neq 1$$

Do it **first using the nondeterministic version** (i.e. guess and check), and **then the deterministic version** (i.e. equality propagation).

认真审题!

参考解答:

Solution First purify F to obtain F_1 and F_2 :

$$F = w_1 \geq 1 \wedge w_1 + x \leq 2 \wedge x > 0 \wedge x = i \wedge w_2 \neq 1 \wedge a[i] = w_1 \wedge w_2 = a\langle x \triangleleft w_3 \rangle[i] \wedge w_3 = 2$$

$$F_1 = w_1 \geq 1 \wedge w_1 + x \leq 2 \wedge x > 0 \wedge x = i \wedge w_2 \neq 1 \wedge w_3 = 2$$

$$F_2 = w_1 = a[i] \wedge w_2 = a\langle x \triangleleft w_3 \rangle[i]$$

$$V = \text{free}(F_1) \cap \text{free}(F_2) = \{w_1, w_2, w_3, x, i\}$$

- Guess-and-check method

Enumerate all the equivalence relation E on V :

1. $\{\{w_1, x, i\}, \{w_2, w_3\}\}$: sat.

Maybe I am lucky enough to find the correct equivalence relation within one guess.

- Equality propagation method

$$F_1 \models x = i$$

$$F_2 \wedge x = i \models w_2 = w_3$$

$$F_2 \wedge w_2 = w_3 \models x = w_1$$

Now no more equality can be drawn, so sat.
